OneTouch Suite 5.33 Release Notes

Version 08-400-006.05

Table of Contents

What's New in OneTouch Suite 5.333

Build 1035

⭐ ENHANCEMENT	**General** – Updated BIN range for Visa Fleet cards. (#91425)

✅ FIXED	**DataManager** – Fixed null value SQL error that occasionally prevented users from generating statements in OneTouch 5.333. (#91357)

✅ FIXED	**General**

1. The Private Card Layout Builder will now check the PrivateCardType and PrivateCardLayout tables to verify a system's identity. (#91408)

2. OneTouch sync client will now properly trim whitespace in records that need to be deleted when a sync conflict occurs due to duplication. (#91294)

3. Enhanced return logic to ensure that approved returns with blank authorization references are not declined. (#91344)

✅ FIXED	**Vanguard POS**

1. Voided sales performed by POS users with limited permissions will now be properly inserted into the sales payment records. (#91278)

2. Fixed a timing issue that was occasionally making prepay refunds available when users attempted to move prepaid fuel. (#91369)

Build 1027

✅ FIXED	**FCT** – Prepay labels will now display properly on systems with more than 2 fueling positions. (#91235)

Build 1026

⭐ ENHANCEMENT	**DataManager**

1. Enhanced DataManager to allow disabling/re-enabling of inventory items. (#90094)

2. Created a new CSMinder Activity Report to help users reconcile data between the Triple E POS and their Red River back-office software. (#89853)

	3. Added capability to synchronize multi-side credit limits for sites without the AR package enabled. Accompanied by a standardized customer payment import. (#90632)
⭐ **ENHANCEMENT**	**Email Assistant** – Added toggle to allow users to compress PDF reports before sending them to guard against formatting issues. (#75515)
✅ **FIXED**	**ccEngine** 1. System will now be able to handle concurrent use of WEX cards with the same PAN but different Track 2 vehicle IDs. (#90493) 2. Removed technical debt and optimized timers to improve ccEngine and Register card authorization processing times. (#89306) 3. Fixed error preventing ccEngine colors from updating correctly. (#89670) 4. Updated system to generate better unique fleet reference numbers; will prevent post-authorization failures due to matching reference numbers. (#90528) 5. Made changes to the logging and decline logic to resolve instances of an empty card object resulting in chargebacks. (#89936) 6. Corrected the expiration date formatting function to properly handle a February expiration in leap years and non-leap years. (#90699) 7. Expired Sinclair gift cards are now accepted. (#89561) 8. Altered connection type logic for ccEngine which previously caused new installs and equipment swaps to fail. (#89532)
✅ **FIXED**	**DataManager** 1. In a multisite environment, bad check names will now be managed at the home office and synchronized down to the sites. (#88146) 2. Newly created quick menu buttons will now default to usable foreground and background colors. (#84097) 3. Advanced pricing levels will now display on the Customer Pricing and Discounts report (eee2033.rpt). (#90144) 4. Updated manual sale entries to use a stored procedure to insert sale data that will prevent duplicate entries in the SalePayments table. (#90410) 5. Added the ability to disable combos in DataManager, which was previously causing errors for sites with more than 32,000 inventory items. (#90174)
✅ **FIXED**	**eeeConfigurator** 1. The Debit Price Level toggle now properly controls the debit fuel price default for the Vanguard and DPT. (#77716) 2. Users can now toggle the Employee Charge button on and off at the register. (#12425)

✅ **FIXED**	**eeeErrorViewer**
	1. Removed the Ingenico 'COM Port' field and 'Save & Test' button from the application. (#89832)
	2. The errorViewer application will now flush the DNS cache when a user restarts services. (#89438)
	3. The errorViewer application will now relaunch properly after an installation completes. (#89519)
✅ **FIXED**	**General**
	1. POS terminals will now check for mismatched software versions before the AddorUpdateConnectedTerminals method is called. (#89557)
	2. Restored error logging capabilities for the file import plugin to function with .NET 4.0 on Windows 10. (#90392)
	3. Optimized EtechMonitor2 CPU to use less than 10% CPU on average. (#89831)
	4. Removed the call to truncate CardsLockedOut table from the GoLive script, which was causing the script to fail. (#90678)
	5. Removed the explicit rollback block to now allow connected terminals and Pioneer sites to roll back from 5.3 versions. (#90527)
	6. Upgrade scripts will now sanitize UPC data during execution to clean out symbols causing upgrade failures. (#90538)
	7. Bundled the e3SecureCert.pfx with the pioneer package to resolve the reported missing cert error. (#90818)
	8. Altered the generate priced transactions routine from the Sync Server to apply FET exemptions to the necessary sales when invoicing. (#89647)
	9. Added function that ensures all cash back/change fields are cleared when an EMV debit transaction is declined due to PIN error. (#91041)
✅ **FIXED**	**Mobile Inventory Manager** - Updated the system to use a new stored procedure when inserting new prices to be more flexible in the field. (#88245)
✅ **FIXED**	**Quickbooks Sync**
	1. Quickbooks Sync now includes vehicle ID, odometer reading, and private card number in all synced transaction data. (#89627)
	2. Quickbooks Sync installers have been split into two packages for a streamlined installation process. (#89836)
	3. Enhanced customer payment tracking that is synced to Quickbooks. (#85507)
✅ **FIXED**	**Sentinel –** Fixed issue causing Sentinel AutoUpdate packages to fail during a Navigator upgrade. (#84081)

✓ FIXED	**tPortController** – Modified the application and associated stored procedures to handle a 32-character GUID value for the P97 Host Auth Number. (#89729)
✓ FIXED	**Triple E Process Monitor -** Restored functionality for cpcontrollerviewer monitoring. (#90819)
✓ FIXED	**Vanguard POS** 1. When a prepay sale is voided at the register, the associated refund history will now also be properly voided. (#90245) 2. Users can now search the Card # popup menu that displays from the Patron Lookup menu. (#89867) 3. Updated system to ensure that change given on a split tender sale will no longer come from 'on account' amounts. (#90408) 4. Enhanced the system to allow users to remove POS Cashier Prompts from the Vanguard POS. (#90244) 5. Resolved error that occurs while performing paid outs on the register application. (#90764) 6. Altered functionality related to Cenex cards to prevent the text/email boxes from populating if eReceipts are disabled. (#90765) 7. Altered event handlers that could cause card objects to be cleared from the salepayments record. (#89753) 8. Tablet POS users are now able to run magstripe credit card transactions over a wireless internet connection. (#89795)
